

CASTLE CREEK CORRIDOR IMPROVEMENT PROJECT

2020 Construction Activities

WORK AREAS AND TRAFFIC CONTROL MAP

2020 CONSTRUCTION | Key remaining work activities include road widening on both sides of the road (for trail), finishing the rockfall netting, concrete work on the lower downhill side of the road, hand rail and guardrail installation, installation of the third speed hump, storm sewer and inlet installation, paving, road striping, and seeding of disturbed areas

TRAFFIC INFORMATION | Within the work area (IN GREY) expect lane closures similar to last year (one lane of traffic, alternating one way with temporary traffic signals). The length of lane closures will vary based on construction activities, but will be as short as possible. Expect approximately 8-10 minute wait times. For safe travel through the area, please heed all signals and signage. Cyclists must queue behind vehicles in closure areas. There is no pedestrian access during construction.

Areas are approximate and for illustrative purposes only.
